

Anti-HLF Antibody Picoband® Fluoro647 Conjugated

Catalog Number: A01284-1-Fluoro647

About HLF

Hepatic leukemia factor is a protein that in humans is encoded by the HLF gene. This gene encodes a member of the proline and acidic-rich (PAR) protein family, a subset of the bZIP transcription factors. The encoded protein forms homodimers or heterodimers with other PAR family members and binds sequence-specific promoter elements to activate transcription. Chromosomal translocations fusing portions of this gene with the E2A gene cause a subset of childhood B-lineage acute lymphoid leukemias.
