About EPS15

Epidermal growth factor receptor substrate 15 is a protein that in humans is encoded by the EPS15 gene. It is mapped to 1p32.3. This gene encodes a protein that is part of the EGFR pathway. The protein is present at clatherin-coated pits and is involved in receptor-mediated endocytosis of EGF. Notably, this gene is rearranged with the HRX/ALL/MLL gene in acute myelogenous leukemias. Alternative splicing results in multiple transcript variants encoding distinct isoforms.
