

Anti-Sox11 Antibody Picoband® FITC Conjugated

Catalog Number: A02603-3-FITC

About Sox11

Transcription factor SOX-11 is a protein that in humans is encoded by the SOX11 gene. This intronless gene encodes a member of the SOX (SRY-related HMG-box) family of transcription factors involved in the regulation of embryonic development and in the determination of the cell fate. The encoded protein may act as a transcriptional regulator after forming a protein complex with other proteins. The protein may function in the developing nervous system and play a role in tumorigenesis.
