

Anti-SCN1B Antibody Picoband® Fluoro594 Conjugated

Catalog Number: A03061-1-Fluoro594

About SCN1B

Voltage-gated sodium (Na⁺) channels are essential for the generation and propagation of action potentials in striated muscle and neuronal tissues. The complete coding region of Sodium channel, voltage-gated, beta 1 (SCN1B) is found in approximately 9.0 kb of genomic DNA and consists of five exons (72 to 749 bp) and four introns (90 bp to 5.5 kb). It is mapped to 19q13.1 and can act as a candidate gene for hereditary disorders affecting membrane excitability. Sodium channel beta1 subunits play important roles in the regulation of sodium channel density and localization and are involved in axo-glia communication at nodes of Ranvier.
