

Anti-CRTC3 Antibody Picoband® Cy3 Conjugated

Catalog Number: A04568-2-Cy3

About CRTC3

CREB-regulated transcription coactivator 3 is a protein that in humans is encoded by the CRTC3 gene. This gene is a member of the CREB regulated transcription coactivator gene family. This family regulates CREB-dependent gene transcription in a phosphorylation-independent manner and may be selective for cAMP-responsive genes. The protein encoded by this gene may induce mitochondrial biogenesis and attenuate catecholamine signaling in adipose tissue. A translocation event between this gene and Notch coactivator mastermind-like gene 2, which results in a fusion protein, has been reported in mucoepidermoid carcinomas. Alternative splicing results in multiple transcript variants that encode different protein isoforms.
