

Anti-DBL Antibody Picoband® Fluoro594 Conjugated

Catalog Number: A05775-1-Fluoro594

About MCF2

The DBL proto-oncogene is a protein that in humans is encoded by the MCF2 gene. The oncogenic protein encoded by this gene is a guanine nucleotide exchange factor (GEF) that exerts control over some members of the Rho family of small GTPases. Several transcript variants encoding different isoforms have been found for this gene. These isoforms exhibit different expression patterns and varying levels of GEF activity.
