Catalog Number: A06087-1-FITC

About NOVA1

RNA-binding protein Nova-1 is a protein that in humans is encoded by the NOVA1 gene. It is mapped to 14q12. This gene encodes a neuron-specific RNA-binding protein, a member of the Nova family of paraneoplastic disease antigens, that is recognized and inhibited by paraneoplastic antibodies. These antibodies are found in the sera of patients with paraneoplastic opsoclonus-ataxia, breast cancer, and small cell lung cancer. Alternatively spliced transcripts encoding distinct isoforms have been described.
