Anti-CD103/Itgae Antibody

Catalog Number: A07091-2

About Itgae

ITGAE(INTEGRIN, ALPHA-E), also known as CD103, is an integrin protein that in human is encoded by the ITGAE gene. The ITGAE gene is mapped to chromosome 17p13 by inclusion within a BAC contig. ITGAE is expressed widely on intraepithelial lymphocyte(IEL) T cells(both alphabeta T cells and gammadelta T cells) and on some peripheral regulatory T cells(Tregs) which is important for decreasing the immune response and appears to play a crucial role in the prevention of autoimmune diseases. ITGAE shares overall homology with other alpha integrins but has a unique 55-amino acid "extra" region located just N-terminal to the I domain that contains 18 consecutive charged residues and a proteolytic cleavage site.

Anti-CD103/Itgae Antibody (A07091-2) Images

IHC analysis of CD103/Itgae using anti-CD103/Itgae antibody (A07091-2). CD103/Itgae was detected in a paraffin-embedded section of mouse colon tissue. Heat mediated antigen retrieval was performed in EDTA buffer (pH 8.0, epitope retrieval solution). The tissue section was blocked with 10% goat serum. The tissue section was then incubated with 2 ug/ml rabbit anti-CD103/Itgae Antibody (A07091-2) overnight at 4°C. Peroxidase Conjugated Goat Anti-rabbit IgG was used as secondary antibody and incubated for 30 minutes at 37°C. The tissue section was developed using HRP Conjugated Rabbit IgG Super Vision Assay Kit (Catalog # SV0002) with DAB as the chromogen.
