

Anti-Fascin 2/FSCN2 Antibody Picoband® HRP Conjugated

Catalog Number: A07840-2-HRP

About FSCN2

Fascin-2 is a protein that in humans is encoded by the FSCN2 gene. It is mapped to 17q25.3. This gene encodes a member of the fascin protein family. Fascins crosslink actin into filamentous bundles within dynamic cell extensions. This family member is proposed to play a role in photoreceptor disk morphogenesis. A mutation in this gene results in one form of autosomal dominant retinitis pigmentosa and macular degeneration. Multiple transcript variants encoding different isoforms have been found for this gene.
