### About TTC9C

TTC9 family belongs to tetratricopeptide repeat (TPR)-containing proteins family (PMID: 35949301). The TPR motifs are arranged in antiparallel alpha-helical hairpins which are clustered to form flexible grooved interfaces. Members in TRP-containing proteins family are involved in a diverse range of biological functions, including cell cycle control, transcription, protein folding, and steroid receptor signaling (PMID: 15497498; PMID: 10786835).
