Anti-Zebrafish GSDMEA Antibody

Catalog Number: AZE7F9U2

About GSDMEA

Acts upstream of or within with a positive effect on pyroptotic inflammatory response. Predicted to be located in endomembrane system. Predicted to be active in cytoplasm. Is expressed in several structures, including gill; heart; inner ear; neuromast; and pleuroperitoneal region. Human ortholog(s) of this gene implicated in autosomal dominant nonsyndromic deafness 5 and sensorineural hearing loss. Orthologous to human GSDME (gasdermin E).

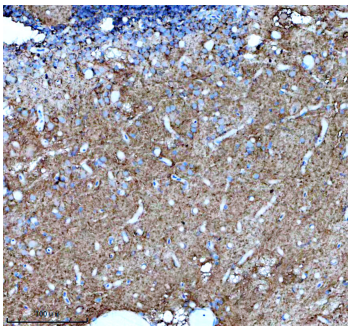
Anti-Zebrafish GSDMEA Antibody (AZE7F9U2) Images



IHC analysis of GSDMEA using anti-GSDMEA antibody (AZE7F9U2). GSDMEA was detected in a paraffin-embedded section of zebrafish brain tissue. Heat mediated antigen retrieval was performed in EDTA buffer (pH 8.0, epitope retrieval solution). The tissue section was blocked with 10% goat serum. The tissue section was then incubated with 2 ug/ml rabbit anti-GSDMEA Antibody (AZE7F9U2) overnight at 4°C. Peroxidase Conjugated Goat Anti-rabbit IgG was used as secondary antibody and incubated for 30 minutes at 37°C. The tissue section was developed using HRP Conjugated Rabbit IgG Super Vision Assay Kit (Catalog # SV0002) with DAB as the chromogen.
