Anti-Zebrafish GSC Antibody Picoband®

Catalog Number: AZP53544

About GSC

Predicted to enable DNA-binding transcription factor activity, RNA polymerase II-specific and RNA polymerase II cis-regulatory region sequence-specific DNA binding activity. Acts upstream of or within several processes, including neuroblast delamination; otic vesicle development; and regionalization. Predicted to be active in nucleus. Is expressed in several structures, including blastodisc; germ ring; mesoderm; neural keel; and pharyngeal arch. Orthologous to human GSC (goosecoid homeobox).

Overview

Product Name	Anti-Zebrafish GSC Antibody Picoband®
Reactive Species	Zebrafish
Description	Boster Bio Anti-Zebrafish GSC Antibody Picoband® catalog # AZP53544. Tested in WB applications. This antibody reacts with Zebrafish. The brand Picoband indicates this is a premium antibody that guarantees superior quality, high affinity, and strong signals with minimal background in Western blot applications. Only our best-performing antibodies are designated as Picoband, ensuring unmatched performance.
Application	WB
Clonality	Polyclonal
Formulation	Each vial contains 4 mg Trehalose, 0.9 mg NaCl, 0.2 mg Na2HPO4.
Storage Instructions	At -20°C for one year from date of receipt. After reconstitution, at 4°C for one month. It can also be aliquotted and stored frozen at -20°C for six months. Avoid repeated freezing and thawing.
Host	Rabbit
Uniprot ID	P53544

Technical Details

Immunogen	E.coli-derived Zebrafish GSC recombinant protein (Position: D45-S240).
Form	Lyophilized
Concentration	Adding 0.2 ml of distilled water will yield a concentration of 500 ug/ml.
Purification	Immunogen affinity purified.
Suggested Dilutions	Western blot, 0.25-0.5 ug/ml, Zebrafish

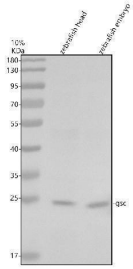
Anti-Zebrafish GSC Antibody Picoband® (AZP53544) Images



Western blot analysis of GSC using anti-GSC antibody (AZP53544). Electrophoresis was performed on a 10% SDS-PAGE gel at 80V (Stacking gel) / 120V (Resolving gel) for 2 hours. The sample well of each lane was loaded with 30 ug of sample under reducing conditions. Lane 1: zebrafish head tissue lysates, Lane 2: zebrafish embryo tissue lysates.After electrophoresis, proteins were transferred to a nitrocellulose membrane at 150 mA for 50-90 minutes. Blocked the membrane with 5% non-fat milk/TBS for 1.5 hour at RT. The membrane was incubated with rabbit anti-GSC antigen affinity purified polyclonal antibody (AZP53544) at 0.5 ug/mL overnight at 4°C, then washed with TBS-0.1%Tween 3 times with 5 minutes each and probed with a goat anti-rabbit IgG-HRP secondary antibody at a dilution of 1:5000 for 1.5 hour at RT. The signal is developed using an ECL Plus Western Blotting Substrate (Catalog # AR1196-200) with Tanon 5200 system. A specific band was detected for GSC at approximately 25 kDa. The expected band size for GSC is at 26 kDa.

Anti-Zebrafish GSC Antibody
