Catalog Number: AZQ6PH06-Fluoro647

About CRKL

Crk-like protein is a protein that in humans is encoded by the CRKL gene. This gene encodes a protein kinase containing SH2 and SH3 (src homology) domains which has been shown to activate the RAS and JUN kinase signaling pathways and transform fibroblasts in a RAS-dependent fashion. It is a substrate of the BCR-ABL tyrosine kinase, plays a role in fibroblast transformation by BCR-ABL, and may be oncogenic.
