Catalog Number: AZQ90Z98-FITC

About BCL2L1

Enables cysteine-type endopeptidase inhibitor activity involved in apoptotic process. Acts upstream of or within negative regulation of intrinsic apoptotic signaling pathway; thyroid gland development; and tissue homeostasis. Predicted to be located in membrane. Predicted to be active in mitochondrial outer membrane. Is expressed in several structures, including blood island; endocrine system; extension; immune system; and nervous system. Human ortholog(s) of this gene implicated in breast cancer; carcinoma (multiple); leukemia (multiple); and pancreatic cancer. Orthologous to human BCL2L1 (BCL2 like 1).
